Definitions of **symptom** on the Web:

- (medicine) any sensation or change in bodily function that is experienced by a patient and is associated with a particular disease
- anything that accompanies X and is regarded as an indication of X's existence
wordnet.princeton.edu/perl/webwn
- The term symptom (from the Greek syn = con/plus and pipto = fall, together meaning co-exist) has two similar meanings in the context of physical and mental health:* A symptom may loosely be said to be a physical condition which shows that one has a particular illness or disorder (see e.g. Longman, 1995). An example of a symptom in this sense of the word would be a rash. ...
en.wikipedia.org/wiki/Symptom
- An indication that a person has a condition or disease. Some examples of symptoms are headache, fever, fatigue, nausea, vomiting, and pain.
www.stjude.org/glossary
- A subjectively perceived problem or complaint reported by the patient. In multiple sclerosis, common symptoms include visual problems, fatigue, sensory changes, weakness or paralysis of limbs, tremor, lack of coordination, poor balance, bladder or bowel changes, and psychological changes.
